10 REASONS WHY

HONICO

WHY YOUR ORGANIZATION STILL NEEDS DYNAMIC LICENSE CONTROL EVEN AFTER SWITCHING TO RISE WITH SAP

1-5

1 TRANSPARENCY

View of consolidated utilization and authorization data across all systems. DLC brings clarity and optimizes SAP's complex licensing with little time expenditure. Real-time compliance, not just when a measurement is due.

2 MONITORING

Without a special tool, SAP cannot comprehensively monitor license use. DLC monitors license requirements across your entire SAP landscape.

3 LICENSE OPTIMIZATION

SAP does not provide a tool for efficiently using licenses. DLC fills this gap and provides security in optimization by rightsizing your licenses.

4 AUTOMATED WARNINGS

SAP does not warn of impending Incompliance, but recalculates later. DLC gives proactive warnings before compliance problems occur.
Risk minimization via a single console.

5 FUE (FULL USE EQUIVALENTS)

For the FUEs, a quasi-permanent configuration is provided. However, comparable flexibility must first be contractually agreed upon for volume-based cloud metrics. STAR does not yet provide the correct license type for each user.

10 REASONS WHY

HONICO

WHY YOUR ORGANIZATION STILL NEEDS DYNAMIC LICENSE CONTROL
AFTER THE SWITCH TO RISE WITH SAP

6 CONTRACTMANAGEMENT

Reliable mapping of SAP contracts:
DLC offers complete transparency of all SAP contracts and license inventories.
Centralized management of your contracts and ancillary agreements.

7 INDIRECT/DIGITAL ACCESS

SAP tools do not calculate indirect access correctly. DLC creates transparency and accuracy by identifying indirect usage. The Passport Tool also needs to be checked.

8 ROLE UTILIZATION ANALYSIS

You need clarity in the use of your roles/ authorization objects
DLC closes the authorization gap.

9 CLASSIFICATION OF YOUR OWN AUTHOBJECTS/ TRANSACTIONS

Prevent assignment to the highest-priced use type. DLC classifies your Z and Y_AUTH objects without any problems.

10 AUTOMATION

A solution such as DLC offers a high degree of Automation frees up essential resources but also avoids manual errors—automated management of user licenses and decommissioning and recycling of assets.
